message; and

BU control means for accepting only a selection out of the outputted data for a reply as the reply to the message.

2. (AS ONCE AMENDED) An electronic news system according to claim 1, further comprising:

fixed form reply managing means for managing a plurality of fixed form replies by data for respectively specifying said plurality of replies, and

totaling means for totaling a number of the selections of each of fixed form replies as the reply to the message, and storing results of the totalization of each of fixed form replies to the message in relation to said specifying data.

3. (AS ONCE AMENDED) An electronic news system according to claim 1, wherein said control means has means for accepting an input of a free form reply to the message, and managing the inputted free form reply in relation to data to specify said message.

4. (AS ONCE AMENDED) An electronic news system according to claim 2, wherein said control means has means for accepting an input of a free form reply to the message, and managing the inputted free form reply in relation to data to specify said message.

5. (AS ONCE AMENDED) An electronic news system according to claim 1, wherein said data for a fixed form reply is one kind or the combination of plural kinds of data selected from a plurality of kinds including text, still picture, speech, sound and moving pictures.

6. (AS ONCE AMENDED) An electronic news system according to claim 1, wherein said control means includes means for causing said output means to output data for a fixed form reply of the kind which fits contents of the message.

GR 7. (FIVE TIMES AMENDED) An electronic news system including a client apparatus and a server apparatus which manages an electronic message and a reply to said message transmitted from the client apparatus, said client apparatus comprising:

storage means for storing data for a fixed form reply, inputted in advance of the message and stored separately from the electronic message;

SB
H
G2
~~input means for inputting the electronic message without information about a reply to~~
said message;

output means for outputting the message with said data for a fixed form reply to the
message retrieved from said storage means, said data for the fixed form reply independent of
the message;

control means for accepting only a selection out of the outputted data for a reply as the
reply to the message; and

communication control means for transmitting the selection to the server apparatus.

NE.
8. (AS UNAMENDED) An electronic news system according to claim 7, wherein the
client apparatus comprises means for accepting an input of a free form reply to the message in
said control means, and the server apparatus comprises free form reply managing means for
managing the free form reply transmitted from the client apparatus in relation to data for
specifying said message.

GB
9. ~~(FIVE TIMES AMENDED)~~ An electronic news system including a client apparatus
and a server apparatus which manages electronic messages transmitted from the client
apparatus, comprising:

said server apparatus comprising:

storage means for storing data for a fixed form reply, inputted in advance of the
electronic messages and stored separately from the electronic messages;

communication control means for transmitting said data for a reply to the client
apparatus;

said client apparatus comprising:

receiving control means for receiving said data for a fixed form reply sent from the
server apparatus, said data for a fixed form reply independent of the electronic messages;

input means for inputting the electronic message without information about a reply to
said message;

output means for outputting the message with the received data for the fixed form reply
to the message;

control means for accepting only a selection out of the outputted data for a reply as the
reply to the message; and

transmission control means for controlling the transmission for transmitting the selected

reply to the server apparatus.

10. (AS ONCE AMENDED) An electronic news system according to claim 9, wherein the client apparatus comprises fixed form reply managing means for managing a plurality of fixed form replies by data for respectively specifying said plurality of replies, and communication control means for transmitting specifying data of the selected reply to the server apparatus as a reply, and the server apparatus comprises communication control means for receiving the specifying data transmitted from the client apparatus as a reply, and totaling means for totaling a number of the selections of each reply as the reply to the message based on said specifying data, and storing the results of the totalization of each reply to said message in relation said specifying data.

11. (AS UNAMENDED) An electronic news system according to claim 9, wherein the client apparatus comprises means for accepting an input of a free form reply to the message in said control means, and the server apparatus comprises free form reply managing means for managing free form reply transmitted from the client apparatus in relation to data for specifying said message.

12. (AS UNAMENDED) An electronic news system according to claim 10, wherein the client apparatus comprises means for accepting an input of a free form reply to the message in said control means, and the server apparatus comprises free form reply managing means for managing the free form reply transmitted from the client apparatus in relation to data for specifying said message.

G4
13. (SIX TIMES AMENDED) An electronic news system including a client apparatus and a server apparatus which manages an electronic message and a reply to said message transmitted from the client apparatus,

said server apparatus comprising:

storage means for storing data for a first fixed form reply, stored separately from the electronic message, independent from the electronic message, and inputted in advance of the message;

communication control means for transmitting the data for the first fixed form reply to the client apparatus,

Sub 141
GT
~~said client apparatus comprising:~~

receiving control means for receiving the first data for the first fixed form reply sent from the server apparatus;

storage means for storing data for a second fixed form reply, stored separately from the message;

input means for inputting the electronic message without information about a reply to said message;

output means for outputting the message with said data for the first fixed form reply or the second fixed form reply;

control means for accepting only a selection out of the outputted data for the first fixed form reply or the second fixed form reply based on the category of the message as the reply to the message; and

means for controlling the transmission for transmitting the selected reply out of the data for the first fixed form reply or the second fixed form reply to the server apparatus.

14. (AS ONCE AMENDED) An electronic news system according to claim 13, wherein the server apparatus comprises fixed form reply managing means for managing a plurality of first fixed form replies with data for respectively specifying said replies, and means for transmitting the specifying data of the first fixed form reply to the client apparatus along with said reply,

the client apparatus comprises fixed form reply managing means for managing a plurality of second fixed form replies with the data for respectively specifying said replies, and means for causing said transmission controlling means to transmit the selected second reply or the selected specifying data of the first reply to the server apparatus as a reply,

said server apparatus further comprises means for transmitting specifying data of the second fixed form reply to the client apparatus, and means for receiving the second reply or specifying data of the first reply transmitted from the client apparatus as a reply in said communication control means, and totaling means for totaling a number of the selections of each reply as the reply to the message based on said specifying data, and storing the results of the totalization of each reply to said message in relation said specifying data,

said client apparatus further comprises means for receiving the specifying data of the second fixed form reply sent from the server apparatus in said receiving control means, and means for outputting the stored second fixed form reply based on said specifying data in said

output means.

15. (AS UNAMENDED) An electronic news system according to claim 13, wherein the client apparatus comprises means for accepting an input of a free form reply to the message in said control means, and the server apparatus comprises free form reply managing means for managing the free form reply transmitted from the client apparatus in relation to data for specifying said message.

16. (AS UNAMENDED) An electronic news system according to claim 14, wherein the client apparatus comprises means for accepting an input of a free form reply to the message in said control means, and the server apparatus comprises free form reply managing means for managing the free form reply transmitted from the client apparatus in relation to the data for specifying said message.

17. (FIVE TIMES AMENDED) A recording medium readable by a computer which manages an electronic message and a reply to said message, comprising:
program code means for causing said computer to store data for a fixed form reply in said computer, the fixed form reply being stored in advance of the electronic message and separately from the electronic message;
program code means for inputting the electronic message without information about a reply to said message;
program code means for causing said computer to output the message with said data for a reply to the message, said data for a reply independent of the message; and
program code means for causing said computer to accept only a selection out of the outputted data for a reply as the reply to said message.

18. (AS ONCE AMENDED) A recording medium according to claim 17, further comprising:

program code means for causing said computer to manage a plurality of fixed form replies with data for respectively specifying said replies; and

program code means for causing said computer to total a number of the selections of each reply as the reply to the message and store the results of totaling the totalization of each reply to said messages in relation to said specifying data.

19. (AS ONCE AMENDED) A recording medium according to claim 17, further comprising:

program code means for causing said computer to accept an input of a free form reply to the message; and

program code means for causing said computer to manage the inputted free form reply in relation to data for specifying said message.

20. (AS ONCE AMENDED) A recording medium according to claim 18, further comprising:

program code means for causing said computer to accept an input of the free form reply to the message; and

program code means for causing said computer to manage the inputted free form reply in relation to data for specifying said message.

21. (FOUR TIMES AMENDED) A ~~message system~~, comprising:

a reply data storage device storing a plurality of fixed form reply sets, each fixed form reply set containing a plurality of replies;

an input device for inputting an electronic message without information about a reply to said message;

a controller receiving the message from a host and allowing a user to retrieve a reply from a fixed form reply set stored in the reply data storage device, the fixed form reply set independent of the message, inputted in advance of the message, and stored separately from the message; and

an output device outputting the selected reply to the host.

22. (AS UNAMENDED) The message system as recited in claim 21 wherein, the controller selects a fixed form reply set based on a category of the message.

23. (AS UNAMENDED) The message system as recited in claim 21 wherein, the reply sets can include video or audio data.

24. (AS UNAMENDED) The message system as recited in claim 21 wherein, the host

receives a plurality of the outputted selected fixed form replies and displays a bar graph illustrating a frequency of responses.

Sub H1

25. (FOUR TIMES AMENDED) A computer readable storage medium storing a computer program instructing a computer to perform:

- storing a plurality of fixed form reply sets, each fixed form reply set containing a plurality of replies;
- inputting an electronic message without information about a reply to said message;
- storing the message separately from the fixed form reply sets, the message being inputted after the fixed form reply sets;
- receiving the message from a host;
- selecting a fixed form reply set independent of the message;
- allowing a user to choose a reply from the selected fixed form reply set;
- sending the chosen reply to the host; and
- computing the frequency of chosen replies sent to the host.

Sub H1
G2

26. (NEW) A method of managing an electronic message and reply choices to the electronic message, comprising:

- storing data for fixed form replies in advance of the electronic message;
- outputting the electronic message with the stored data for the fixed form replies; and
- selecting, subsequent to inputting the electronic message, certain of the outputted fixed form replies as the reply choices to the message.

27. (NEW) The method according to claim 26, further comprising:

- managing the fixed form replies by data respectively specifying the fixed form replies;
- totaling a number of the selections of each of the fixed form replies as the reply choices to the message; and
- storing results of the totalization of each of the fixed form replies to the message in relation to the specifying data.

REMARKS

In accordance with the foregoing, claims 1, 7, 9, 13, 17, 21, and 25 have been amended. Claims 26 and 27 have been added. Claims 1-27 are pending and under
